FOR IMMEDIATE RELEASE

BRAWN MIXER, INC: EXCLUSIVE

BRAWN Mixer introduces new BLP shaft seal

October 15, 2014, Holland, Michigan – Brawn Mixer has developed a **new ‘dry running’ shaft seal, the BLP**, for its complete line of top entry mixers.

The new device will outperform the traditional ‘packed stuffing box’ seals in most applications. The seal can be applied to top entry mixers with operating speeds from 30 rpm to 350 rpm. Brawn is currently developing models to operate a high as 1750 rpm. Other developments include retrofit kits for existing packed box seals.

Dan Keller, General Manager at Brawn said, “one of the great benefits to our customers is this seal will provide better performance, lower maintenance and minimal added initial cost.”
