

## DESIGN NEWS

Intermediate Bulk Containers, aka totes or IBC's are a major means of transporting liquid chemicals, paint and additives across the country and around the world. Plus this method of transport and storage is growing. Millions of new tanks are shipped each year.

Brawn has supplied mixers for many variations of these 'totes' and illustrated here is yet another. The photo shows a Brawn LDA or SDA air powered mixer mounted to a 6" cap from a typical 'IBC'. Also shown below is a typical plastic IBC. Due to the many variations, customers should ship the cap(s) to Brawn for mounting.

**TYPICAL IBC**

**LDA with  
Tote Cap**

The price of this optional mounting method is \$998.00 for the LDA or \$1144.00 for the SDA. The price includes the attachment of the cap, a GAST 4 AM air motor and up to a 6" propeller. Shaft lengths up to 36" are standard. Delivery time is normally 2-3 weeks.

If you have customers in your area (and I know you do) that use reusable IBC's, ask them if the chemicals need mixing.

Please insert this page into your BRAWN sales manual.
